Abstract (en)  
[origin: EP3165845A1] A ventilation device (23) includes a temperature regulating coil (5) that is capable of changing the cooling capacity at multiple stages, and that cools a supplied-air flow after having undergone total heat exchange by a total heat exchanger (4), a target indoor-humidity storage unit (13) that stores therein a target indoor humidity that is a target value of the indoor-air humidity, and a control unit (14) that decides the cooling capacity of the temperature regulating coil (5), such that the humidity of the supplied-air flow becomes the target indoor humidity, based on measurement values of an outside-air temperature sensor (11) and an outside-air humidity sensor (12) when the target indoor humidity is lower than an actual measurement value of the indoor-air humidity measured by an indoor humidity sensor (18).
