Abstract (en)

A heat source device having a refrigeration cycle in which a compressor, a heat source heat exchanger, an expansion valve, and a heat medium heat exchanger are connected, the heat source device includes a heat exchange chamber that houses at least the heat source heat exchanger and a mechanical chamber that houses at least the compressor and the heat medium heat exchanger. A heat medium pipe is connected to the heat medium heat exchanger, one end of the heat medium pipe is located inside the mechanical chamber, and the other end of the heat medium pipe is located outside the mechanical chamber.
