Abstract (en)

[origin: WO2016005567A1] The invention relates to an applicator (1) comprising: a gripping member (5), a tip (10) attached to the gripping member (5), and an application member (15), the tip (10) comprising a heating member (25) for heating the application member (15), and a source of electricity (20) for powering the heating member (25), a unit (30) for controlling the source of electricity (20), a first temperature sensor (35), characterized in that the unit (30) is suitable for: producing, on the basis of the first parameter, a second parameter representative of the rate of the temperature rise of the heating member (25), and comparing the second parameter to at least one threshold value stored in memory in the unit (30) and, on the basis of the result of the comparison, switching off the electrical power supply of the heating member (25).
