Abstract (en)

[origin: WO2016005148A1] The invention relates to a discharge device (1) comprising an actuating handle (2), a first pump system (3) for conveying a first medium and a second pump system (4) for conveying a second medium, wherein the actuating handle (2) can be moved between an initial position and an end position, wherein the first pump system (3) comprises a first pump chamber (31) and a first piston (32) arranged in a displaceable manner in the first pump chamber (31), wherein the second pump system (4) comprises a second pump chamber (41) and a second piston (42) arranged in a displaceable manner in the second pump chamber (41), wherein the first piston (32) and the second piston (42) can be displaced by means of the actuating handle (2) in the direction of actuation, wherein the actuating handle (2) and the first piston (32) are coupled to each other such that the actuating handle (2) and the first piston (32) can be displaced relative to each other in a direction of actuation via a free travel (L) .
