Abstract (en)  
[origin: WO2016005949A1] A package (1) of smoke articles comprising: a container (2), which has a parallelepiped shape and has a front wall (9), a rear wall (10), a bottom wall (8) and two lateral walls (11); a parallelepiped-shaped inner wrapper (3) that wraps a group of smoke articles, which is housed inside the container (2) and has a transverse dimension that is less than the transverse dimension of the container (2) so as to form a cavity inside the container (2); a collar (12), which is arranged inside the container (2) for projecting partially outside an open top end (4) of the container (2) and comprises a front wall (13), which is arranged in contact with the front wall (9) of the container (2), and two lateral walls (14), which are arranged on opposite sides of the front wall (13) and are arranged in contact with the lateral walls (11) of the container (2); and a filling element (15) arranged within the cavity to securely retain the inner wrapper (3) in the container (2), wherein the filling element (15) comprises an abutting wall (16) for supporting the inner wrapper (3), a top wall (17) connected to a top end of the abutting wall (16) and substantially perpendicular to the abutting wall (16), and two lateral walls (19) that are arranged at opposite ends of the abutting wall (16) and are substantially perpendicular to the abutting wall (16); wherein the collar (12) and the filling element (15) are elements that are distinct from one another; the package (1) of smoke articles is characterised in that the filling element (15) comprises a rear wall (18) connected to the top wall (17) and parallel to and opposite the abutting wall (16), wherein an end portion of the rear wall (18) of the filling element (15) rests on and is glued to the rear wall (10) of the container (2).
