Abstract (en)

[origin: WO2016005341A1] The present invention relates to an absolutely safe closure of beverages, food, medical bottles, so that they cannot be opened and reclosed assuming the shape of first production in the factory. The stopper is engaged with the container via a safety strip (6) located between the wall of the stopper and the wall of the bottle neck, so that detachment of the stopper from the bottle neck is possible only by tampering with the safety strip in such a way that it won't be possible to reinstall the stopper on the bottle the way it was when leaving the factory.
