Abstract (en)

[origin: WO2016005155A1] Capsule (1) with a preferably rotationally symmetrical capsule body (2) with a side wall (3), with a base (4) and with a cover (5), which covers the capsule body (2), to form at least one chamber (6), wherein, in order to guide a liquid through the chamber (6), the cover (5) forms an inlet side and the base (4) forms an outlet side with an outlet opening (8), wherein a separate inner cup (9) which covers the outlet opening (8) and through which the liquid can flow is held in the capsule (1) above the base (4) and contains a substance (7) for the preparation of a liquid food, wherein the base (4) and the inner cup (9) each have sealing surfaces (13, 14) which correspond to one another, wherein the two sealing surfaces (13, 14) can be pressed against one another when a hydraulic pressure is applied in the inner cup (9).
