Abstract (en)
[origin: WO2016034234A1] A disconnecter switch (1) comprising a first conductor piece (14), a second conductor piece (12) and a third conductor piece (22) that connects the first and the second conductor piece (12, 14) in a first position is intended to switch the highest possible currents in the shortest possible time and to have an enabling capacity. To achieve this, the third conductor piece (22) is secured in the centre of a first shaft (20) of a first rotary actuator.
