Abstract (en)
A protection device (1, 100) for the personal protection of a user is described. The protection device comprises an inflatable element (2, 102), inside which an inner chamber (3, 104) is defined, and a plurality of tie-members (5) distributed inside the inner chamber (3, 104). The inflatable element (2, 102) is adapted to assume an inflated active condition and a deflated rest condition. The inflatable element (2, 102) includes a first wall (15) and a second wall (16) situated opposite each other and connected along a perimeter so as to define said inner chamber (3, 104), a first mesh (18, 103a) which at least partly internally lines said first wall (15), and a second mesh (19, 103b) which at least partly internally lines said second wall (16). The tie-members (5) have opposite ends (5a, 5b) fixed respectively to said first mesh (18, 103a) and to said second mesh (19, 103b), each of said first wall and said second wall (15, 16) including at least one layer consisting of, including or made of TPU or thermoplastic polyurethane.
