Abstract (en)
[origin: US2017129756A1] A lifting mast of an industrial truck includes a load handling arrangement that can be raised and lowered and two vertical rails at a lateral distance from one another that are connected to one another by at least one cross member. The cross member is X-shaped and includes a central area located between the vertical rails and braces that extend in an X-shape from the central area to the vertical rails and are fastened to the vertical rails. Between the central area and two pairs of braces that extend to one of the two vertical rails there are respective see-through openings that extend to one of the two vertical rails.
