Abstract (en)  
The present invention relates to a rotary switch (10) comprising a body (2) having a housing (5) and a printed circuit board (1) positioned therein; an adjusting wheel (12) having limited circular movement on the body (2), a magnetic member (16) suitable for magnetic interaction with the printed circuit board (1) and a magnetic member shaft (8) having the magnetic member (16). The magnetic member shaft (8) positioned inside the housing (5) comprises a shaft connection housing (9) and said adjusting wheel (12) is connected to the body (2) with the first lateral wall (29a) and to the shaft connection housing (9) with the second lateral wall (29b) for more sensitive rotation around a axis.
