Abstract (en)

[origin: WO2016008699A1] The invention relates to a dishwasher, in particular a domestic dishwasher (1), comprising a washing compartment (3) which is designed to accommodate items (17, 17a, 17b) to be washed, a container (2) delimiting the washing compartment (3), a pump (6), which is designed to circulate washing liquid in the container (2), a washing program control device (9), which is designed to execute at least one washing program and to control the pump (6), and at least one optical detection means (15, 15a-15c) connected to the washing program control device (9), said optical detection means being designed to optically detect at least one compartment section of the washing compartment (3), wherein the washing program control device (9) is designed to adjust the washing program on the basis of the state in the washing compartment (3) detected by the optical detection means (15, 15a-15c), and the optical detection means (15, 15a-15c) is rotatably mounted inside the container (2) such that different compartment sections of the washing compartment (3) are detected by the optical detection means (15, 15a-15c) in relation to the position and/or the location of the optical detection means (15, 15a-15c).
