Abstract (en)
[origin: CA2951752A1] The invention relates to a side-rail arrangement (10) for mounting on a hospital bed and/or care bed (1), having a movable side-rail element (20), comprises in the longitudinal direction of the bed and at opposite ends bearing regions (22, 22') which are movably mounted relative to holding elements (30, 30'). In the event of a relative movement of a bearing region (22) to the associated holding element (30), the side-rail arrangement (10) is designed to cause a traction in a traction element (50), wherein the traction in turn causes or supports a relative movement of the bearing region (22') of the other end of the side-rail element (20) relative to the associated holding element (30').
