Abstract (en)

[origin: WO2016008937A1] The present invention relates to methods for the intercellular transfer of isolated mitochondria in recipient cells. In particular, the present invention relates to a method for the intercellular transfer of an amount of mitochondria isolated from a population of donor cells into a population of recipient cells comprising the step of i) centrifuging the population of recipient mammalian cells in presence of the isolated mitochondria at centrifugation force ranging from 1000g to a 2000g at a temperature ranging from 1°C to 8°C and for a time ranging from 5min to 30min, ii) resting the centrifuged cells at a temperature ranging from 30°C to 40°C for a time ranging from 90min to 180min, and iii) repeating the cycling of steps i) and ii) for a sufficient number of times for reaching transfer efficiency.
