Abstract (en)
[origin: WO2016008543A1] Mobile high-pressure-cleaning apparatus (10) having a vehicle trailer, on the chassis (12) of which at least two running wheels (18, 20) are retained in a rotatable manner, and having a high-pressure-cleaning appliance (94), which has a motor (96) and a pump (98), and also having at least one water-storage tank (32, 34) for storing water for the high-pressure-cleaning appliance (94). In order to develop the high-pressure-cleaning apparatus (10) such that the high-pressure-cleaning appliance (94) can be supplied with water optionally from the at least one water-storage tank (32, 34) or from a water-supply network, without any risk of water removed from the water-supply network being guided back again to the water-supply network, it is proposed that the high-pressure-cleaning apparatus (10) should have a decoupling tank (106) having at least one inlet (110), which can be connected to the water-supply network, and having at least one outlet (122), which is connected to the high-pressure-cleaning appliance (94) and, via at least one user-actuable shut-off member (130), to at least one water-supply tank (32, 34).
