Abstract (en)

[origin: WO2016008559A1] The invention relates to a device for producing cigarette packages (20), preferably having a front wall, a rear wall, and side walls, wherein blanks (12) are separated from a material web (14), fed to a first folding station (33), and received by a folding revolver (56) after a first folding step. After the partially finished packages (10) have been filled, said packages enter the region of a finishing unit (35), mainly for the gluing of folding tabs and for the final folding of the blank of the packages (10). Said packages are then transferred to a transversely oriented discharge conveyor (36).
