Abstract (en)
[origin: WO2016032601A1] A handle structure (H1, H2) for a carton includes a pair of adjoining hand flaps (42A, 42B) hingedly connected to a handle panel (26A, 26B) by a pair of hinged connections (41A, 41B). Each hinged connection has a longitudinal axis disposed at an acute angle ($\alpha+\beta$) with respect to the vertical (N2). The longitudinal axes of the hinged connections define an obtuse angle (λ) therebetween and extending divergently downwards.
