Abstract (en)

[origin: WO2016009023A1] The invention relates to a dispenser (1) for goods which can be portioned, in particular tablets (T), comprising a main part (2), a dispensing opening (3), and an actuating device (4) which is designed such that goods can be dispensed from the dispensing opening (3) when the actuating device (4) is actuated. The dispenser (2) has at least one closure device (5), a first storage container (6), and at least one second storage container (7). The storage containers (6, 7, 8) are arranged in the main part (2) in a movable manner relative to the main part (2), and each of the storage containers has the same number of individual chambers (9) for receiving the goods. The closure device (5) is designed such that in each case only one chamber (9) is connected to the dispensing opening (3), and the first storage container (6) can be moved upon actuating the actuating device (4) in order to connect a subsequent chamber (9) with the dispensing opening (3). The first storage container (6) has a driving element (10), and the driving element (10) engages with the second storage container (7) when the first storage container (6) has carried out a number of movements corresponding to the number of chambers (9) of the first storage container (6).
