Abstract (en)

[origin: WO2016007978A1] The invention relates to a device for fastening a baseboard (8) to a wall (2), comprising a retaining profile (1) made of plastic which forms a wall piece (3) and a receiving piece (7) for the baseboard (8), said receiving piece being arranged offset transversely to the wall piece (3) and having clamping ribs (10) that extend in the longitudinal direction of the receiving piece. In order to create advantageous construction conditions, the clamping ribs (10) are coextruded with the retaining profile (1) from a flexurally elastic plastic.
