Abstract (en)

[origin: WO2016009457A1] A mobile unit (5) is described for measuring running paths for handling systems, in particular bridge cranes, sliding on a route (2), comprising at least one first measuring means (62) which constitutes a space reference of the mobile unit (5) with respect to at least one fixed measuring unit (3) comprising second measuring means (61), the first measuring means (62) being connected to the mobile unit (5) by interposing at least one handling means adapted to synchronize measuring operations between the first measuring means (62) and the second measuring means (61) of said fixed measuring unit (3). A system for measuring (1) running paths for handling systems through such mobile unit (5) and a process for measuring through such system (1) are further described.
