Abstract (en)

[origin: EP3170637A2] This invention relates to a method for forming a board-shaped formed element (1) from a wood mixture comprising wood slabs, wherein the method comprises the following steps: the supply of a wood mixture comprising wood slabs whereof the width lies between 1 and 4 cm, the length lies between 2 and 5 cm, and the thickness lies between 0.2 and 2 cm; the mechanical pressing of the supplied wood mixture so that a wood mixture having a moisture content lying between 30 and 45 % is obtained, and mixing of the pressed-out wood mixture with an adhesive and form-pressing into a board-shaped formed element (1).
