Abstract (en)
[origin: WO2016012100A1] The invention concerns a coating system for coating objects, wherein a coating material (82) can be dispensed by means of an application device (12) with a dispensing arrangement (16, 18). A supply system (26) comprises at least one first feed container (20.1) for coating material, which is connected via a first supply line (24.1) and a first material valve (32.1) to the dispensing arrangement (16, 18), and a second feed container (20.2) for coating material, which is connected via a second supply line (24.2) and a second material valve (32.2) to the dispensing arrangement (16, 18). Also provided is a cleaning system (52) having at least one first cleaning line (50.1), to which rinsing agent (84) can be fed via a first rinsing agent feed line (56.1), and a second cleaning line (50.2), to which rinsing agent (84) can be fed via a second rinsing agent feed line (56.2). The first cleaning line (50.1) is connected via a first cleaning valve (48.1) to the first supply line (24.1) and the second cleaning line (50.2) is connected via a second cleaning valve (48.2) to the second supply line (24.2). The first cleaning line (50.1) and the second cleaning line (50.2) are connected to each other via a connection line (78), connection points (80.1, 80.2), relative to the flow direction towards the dispensing arrangement (16, 18), being disposed in front of each cleaning valve (48.1, 48.2).
