Abstract (en)

[origin: WO2016012661A1] The invention relates to a motor vehicle low area device comprising two impact absorption elements, which are a front (4) element and a rear element. Said device is characterized in that it includes an intermediate housing (5) that is open towards the front, partially fits into the front impact absorption element, and comprises a back wall, assembled with the rear impact absorption element. Said housing (5) is suitable for forming a cavity for receiving the front impact absorption element (2) in a compressed form.
