Abstract (en)  
[origin: WO2016012747A1] A reel assembly is provided comprising a reel support structure, a cylindrical support drum, that is rotatably coupled to said reel support structure, a motor drive, that is operably coupled to said reel support structure and said cylindrical support drum, and adapted to selectively rotate said cylindrical support drum in a clockwise and anticlockwise direction. The cylindrical support drum further comprises at least one first support drum portion, that is coaxial with said cylindrical support drum and adapted to operably accommodate a first flexible string, at least one second support drum portion, that is coaxial with said cylindrical support drum and adapted to operably accommodate a second flexible string, and at least one circumferential divider, that is coaxial with said cylindrical support drum and adapted to divide said at least one first support drum portion and said at least one second support drum portion, wherein said first and second support drum portions comprise respective first and second string connectors, each adapted to releasably connect to a first end portion of respective first and second flexible strings.
