Abstract (en)
[origin: WO2016011989A1] A reverse motion lock for a rotary closure system (1) with a first closure element (10) which is arranged rotatably in relation to a second closure element (20) and is securable in at least one oriented position, having at least one latching element (11) which is fixed on one of the closure elements (10, 20) and corresponds with at least one associated latching cam (24) in such a manner that the first closure element (10) is secured releasably in relation to the second closure element (20) in the at least one oriented position, wherein the at least one latching element (11) is fixed elastically on a closure element (10, 20) via a web (13) such that the latching element (11) is swingable.
