Abstract (en)

[origin: WO2016012163A1] The invention relates to soap bar compositions comprising specific ratios of C10 to C12, maximum values of C14 and maximum values of unsaturated C18 other than oleic, which retain high foam compared to similar bars (made from the same oils in the same ratios) wherein noted criteria are not met. It further relates to a method of enhancing foam in water of water hardness greater than about 25 using said bar.
