Abstract (en)
[origin: WO2016012402A1] A refrigeration appliance, in particular a household refrigeration appliance, has a heat-insulating wall which delimits a cooled storage chamber (3); a reservoir (13) embedded in said wall; a conduit for a heat exchanger fluid, part of said conduit forming a first heat exchanger (18) which is arranged in thermal contact with the reservoir (13); and a shut-off element (21) which can be switched between a position allowing circulation of the heat exchanger fluid and a position blocking circulation.
