Abstract (en)  
[origin: WO2016012045A1] Synchronization may be valuable in many communication systems. For example, long term evolution unlicensed may benefit from dynamic trigger-based synchronization. A method can include receiving, at a device, a cell search and/or synchronization command from the network on the primary cell. The method can also include performing, by the device, cell search and/or synchronizing on a secondary cell based on the cell search and/or synchronization command.
