Abstract (en)  
[origin: US2017143099A1] A housing for cosmetic product includes a base receiving at least one cosmetic product and a cover mounted on the base so as to be able to rotate, and to be moved between a closed position and an open position. The housing also includes an intermediate plate receiving at least one cosmetic product and mounted on the cover so as to be able to rotate and is arranged between the base and the cover, the plate being movable between a retracted position and a deployed position. The plate passes from the retracted position thereof to the deployed position thereof by a manipulation of the cover. The intermediate plate as well is movable in rotation between the deployed position and a release position in which the plate is led to a distance from the base so as to expose and/or make accessible the entire surface area of the base.
