Abstract (en)
[origin: EP3173372A1] The present invention relates to a load carrier for a forklift truck (10), comprising a front part (20), a rear part (22) and a tilt device (24), wherein the front part (20) is adapted to carry at least one fork (12) and the rear part (22) is adapted to be movably arranged on an mast (16) of a forklift truck (10), wherein the front part (20) is movably attached to the rear part (22), such that the front part (20) can pivot in relation to the rear part (22) around a pivot axis (A), and wherein the tilt device (24) comprises a movable component (28') arranged for pivoting the front part (20). The tilt device further comprises at least one contact member (30) arranged on the movable component (28'), wherein the at least one contact member (30) is movably mounted in relation to the movable component (28'), and wherein the at least one contact member (30) comprises a flat contact surface (32). The invention also relates to a forklift truck (10) comprising such a load carrier (14).
