Abstract (en)

Covering member (10) for concealed hinges (14), comprising a platelet (11) with a central body (12) with which at least one tab (13) is associated, configured to be inserted in a corresponding seating (17) associated with the concealed hinge (14). The tab (13) comprises an elastically yielding mechanical mean, which is configured to couple with at least one part of the seating (17) to obtain a stable and reliable coupling between the tab (13) and the seating (17) and therefore between the covering member (10) and the concealed hinge (14).
