Abstract (en)

[origin: EP3174067A1] A movement system for moving a dry shielded canister includes a stabilization portion, and a canister support portion engaged with the stabilization portion and configured for translational movement between an extended position and a retracted position, the canister support portion including a roller interface for supporting and moving a canister. A method of moving a dry shielded canister includes moving a canister support portion engaged with the stabilization portion from a retracted position to an extended position; moving the roller interface from a retracted position to an extended position to engage with the canister; and moving the canister.
