Abstract (en)
[origin: WO2016015718A2] The invention relates to a buoyant support (1) for an object (2), comprising as components on the device side: a floating body (3), an insertion sleeve (7) for holding the object (2) and a clamping device (4) with at least one upper-side clamping part (5) and at least one lower-side clamping part (6), wherein the clamping parts (5, 6) have each at least one clamping surface which is planar on the floating body (3), wherein the floating body (3) is clamped between the clamping surface of the at least one clamping part (5) arranged on the upper side of the floating body and the clamping surface of the at least one clamping part (6) arranged on the lower side of the floating body, wherein the insertion sleeve (7), starting from the upper side of the support (1), is passed through the clamping device (4) and protrudes on the bottom side from the clamping device (4), and wherein at least one means (9) for fastening a lowering weight (10) is provided on the lower-side clamping part (6) and/or on the end (8) of the insertion sleeve, which protrudes from the clamping device on the lower side, the components of which can be releasably connected to one another so that the support (1) can be assembled in a modular manner from the components and can be again dismantled back into their components.
