Abstract (en)

[origin: WO2016016433A1] With a mascara brush comprising a core made of at least two wire sections (12, 13) twisted with one another along a wire-core longitudinal axis (LD) and a set of bristles (26) made of bristles (1) formed from plastic filaments, each of said bristles being held in a clamped manner between the two wire sections (12, 13) and being formed on the free ends thereof with or without a wedge-shaped bristle tip, wherein the bristles, in particular at least partially, are formed from internally hollow filaments, a solution is provided with which the mass delivery in relation to the known applicators is improved. Same is achieved in that, in particular at least, the bristles formed on the inside in a hollow manner on the radially outward free ends have an oblique cut (3) in the form of a simple wedge and comprise a wedge-shaped bristle tip comprising at least one cut surface (4) forming a wedge.
