Abstract (en)  
[origin: WO2016015067A1] The invention relates to a dispensing system comprising a dispenser for sections that are to be separated from a material web that is wound to form a roll (10) and comprising at least one material web that is wound to form a roll (10), said roll having an axially protruding bearing journal (12). In said dispensing system the dispenser is provided with a guide track (4) for the bearing journal (12), in which track a releasable blocking element is provided. The blocking element in the guide track (4) can be opened by the action of a magnetic force.
