Abstract (en)

[origin: WO2016015948A1] The invention relates to a device for fixing at least one temperature sensor to an animal, intended to be placed in the auditory canal of an animal. According to the invention, such a device comprises a first portion (31, 41, 51, 61, 71) defining at least one seat (311, 411, 511, 611, 711) for receiving at least one temperature sensor and means for transmitting at least one temperature value, and a second portion (32, 42, 52, 62, 72) forming a spring, the first portion and/or the second portion being configured to bear on at least two separate zones of the auditory canal of the animal, said second portion (42, 52) comprising at least one leaf spring, and said first portion (41, 51) being a helical element connected to said at least one leaf spring.
