Abstract (en)  
[origin: WO2016015933A1] The invention relates to a method for producing a control arm (1) for a motor vehicle, in particular a multi-point control arm, preferably a transverse control arm, substantially formed of a fiber-plastic composite structure, comprising the steps of creating a preform structure having load-matched fiber orientation, inserting the preform structure into a shaping tool, consolidating the preform structure in the tool by supplying pressure and/or temperature, removing the control arm, and processing the control arm (1) further.
