Abstract (en)
   [origin: WO2016015862A1] The invention relates to a food package comprising a plurality of food products comprising granules, such as sugar cubes. The food package further comprises a packaging box arranged around the food products and comprising a body (10) and a cover (60). The body (10) is provided with a bottom wall (11) and first and second mutually opposed side walls (12, 16), therewith defining an inner space in the body (10) for the food products. The inner space of the body (10) is exposed at a top side for provision and removal of food products. The cover (60) has a cover wall (61) which at least covers said exposed inner space of the body (10). The body (10) is provided with at least one strip (21, 22) extending above said inner space. The strip is interconnected to a corresponding one of the first and second side walls (16, 12) along an edge (23, 24) of the body, touches the cover wall (61) - in at least a portion of the strip and at least substantially - and is configured to be elastically rotatable along the said edge (23, 24) of the body (10).
