Abstract (en)

[origin: WO2016016374A1] The rewinding machine comprises a first winding cradle formed between a first winding roller (1), a second winding roller (3) and a third winding roller (7). The first winding roller and the second winding roller define a nip (5) through which there pass the winding cores (A) with the web material (N) being wound around them; The rewinding machine also comprises a feed path of the winding cores that pass between the first winding roller (1) and the third winding roller (7). A second winding cradle is formed between the first winding roller (1), the second winding roller (3) and a fourth winding roller (8). The rewinding machine also comprises a rolling surface (19) extending around the first winding roller (1) and defining a feed channel (21) of the winding cores.
