Abstract (en)
[origin: US2016032556A1] A wear component for a ground engaging tool includes a longitudinally-extending mounting portion connectable to a mounting assembly of the ground engaging tool. The wear component also includes at least one wear portion connected to the mounting portion. The at least one wear portion forms at least one ground engaging edge. The wear component further includes a plurality of longitudinally-spaced ribs projecting from the at least one wear portion and connecting to the mounting portion. The plurality of ribs are configured to affect a direction of a flow of material passing along the at least one wear portion.
