Abstract (en)
[origin: WO2016037862A1] The invention relates to a fitting arrangement (11) for a window, a door or the like, having a scissors fitting comprising a scissors arm (13) and a scissors link (15) coupled in an articulated manner to the scissors arm, wherein the scissors link is mounted at a first coupling point (39) to a cover rail (17), which is assigned to the window sash or the door leaf, so as to be rotatable about an axis of rotation (49), wherein the scissors link at the first coupling point is displaceable with respect to the cover rail in a direction transverse to the axis of rotation and a stop (18) for the scissors link is provided on the cover rail, which stop is positioned and designed such that, when the sash/leaf is closed by tilting, the scissors link is displaced by the stop with respect to the cover rail, resulting in a shortening of the effective length of the scissors fitting.
