Abstract (en)

[origin: WO2016015768A1] The present invention relates to a refrigeration appliance having at least one fresh food refrigeration compartment and at least one freezer compartment, the refrigeration appliance having a refrigeration and defrost circuit (1) comprising a compressor (2) for compressing a refrigerant to a high temperature and a high pressure, a condenser coil (3) in connection with the compressor (2) and in which the refrigerant is condensable into liquid, a cooling coil (5) in connection with the condenser coil (3) through a first refrigerant expansion element (6) and a freezing coil (8) in connection with the condenser coil (3) through a second refrigerant expansion element (7).
