Abstract (en)

[origin: WO2016016232A1] The invention proposes a label (10) for a drug container which is in a number of parts or can be divided into a number of parts. The label (10) has a first label portion (1) for fastening on a first container part and a second label portion (2) for fastening on a second container part. The first label portion (1) serves for being wrapped all the way round the first container part more than once and is arranged within a first basic-surface-area region (G1) of the basic surface area (G) of the label (10), said first region being intended for wrapping round the first container part. The second label portion (2) comprises a supply label (20) with a first sub-portion (21) and a second sub-portion (22). The first sub-portion (21) is arranged in the first basic-surface-area region (G1) and the second sub-portion (22) is arranged in a second basic-surface-area region (G2), which is intended for fastening on a second container part. The label (10) is designed such that, when the first and the second label portions (1, 2) are pulled apart from one another in order for a container which has the label (10) adhesively bonded around it to be opened, the first and the second label portions (1, 2) tear off from one another and the first sub-portion (21) of the supply label (20) forms a grip tab (26), in order for the supply label (20) to be pulled off from a remainder of the second label portion (2) and/or from the second container part.
