Abstract (en)  
[origin: WO2016016567A1] The invention relates to a method for decoding a digital signal encoded using predictive coding and transform coding, comprising the following steps: - predictive decoding (304) of a preceding frame of the digital signal, encoded by a set of predictive coding parameters; - detecting (302) the loss of a current frame of the encoded digital signal; - generating (312) by prediction, from at least one predictive coding parameter encoding the preceding frame, a frame for replacing the current frame; - generating (316) by prediction, from at least one predictive coding parameter encoding the preceding frame, an additional segment of digital signal; - temporarily storing (317) said additional segment of digital signal.
