Abstract (en)
[origin: US2016206010A1] The present invention provides a male underwear, which can maximize a ventilation effect around the skin of the scrotum to effectively cool the scrotum and the testes in the scrotum by separating the penis from the scrotum to completely separate the foreskin of the penis from the scrotum, isolating the scrotum from the inner thighs to prevent the scrotum from coming into direct contact with the inner thighs, and exposing the scrotum to the external air to then be suspended.
