Abstract (en)
[origin: EP3175730A1] A ski boot (1) comprising a rigid shell (2) which is shaped so as to accommodate the foot of the user, and has a lower part structured to couple with a ski binding device; a rigid cuff (3) which is shaped so as to surround the ankle of the user, and is pivotally jointed to the shell (2) so as to be able to pivot about a rotation axis (A) substantially perpendicular to the midplane of the boot; and a manually operated cuff closing and locking mechanism (14) which is selectively able to rigidly lock the cuff (3) to the shell (2), so as to prevent any pivoting movement of the cuff (3) on the shell (2) and at the same time to tighten the cuff (3) on the leg of the user.
