Abstract (en)  
The invention provides a pack (12) for at least one consumer article, especially at least one electronic cigarette cartridge (14). The pack (12) comprises a container component (16) for accommodating a consumer article, a lid component (22) configured for assembly with the container component (16) for covering or closing an open side of the container component (16), and a latching mechanism for holding the lid component (22) in a latched state fixed on the container component (16). The latching mechanism includes first resilient latching members (28a, 28b) provided at opposite end regions or opposite side walls (20) of the container component (16) for resiliently engaging with complementary first latching elements (30a, 30b) provided on the lid component (22), wherein the first resilient latching members (28a, 28b) are configured to be pressed towards one another to disengage the complementary first latching elements (30a, 30b) and release the latching mechanism in order to remove the lid component (22).
