Abstract (en)
[origin: EP3176319A1] To provide a rope which is light in weight and flexible per se, resistant to invasion of sand granules and the like into strands thereof, and less prone to suffer fiber breakage caused by the sand granules nor to suffer per se inadvertent breakage under a small tensile load. The rope includes: a core material formed by paralleling, twisting or braiding a plurality of yarns; and a filter material that covers a periphery of the core material and is comprised of a tubular woven fabric formed by weaving warp yarns and weft yarns.
