Abstract (en)
[origin: EP3176500A1] A lighting device for vehicles (4) comprising a container body (8) having at least one light source (16) to emit a light beam (44), a light guide (24) having a light guide body (28) which extends from a light inlet wall (32), facing said light source (16), to a light outlet wall (36), adapted to propagate said light beam (44). Advantageously, the light guide body (28) comprises, at the light inlet wall (32), at least one focusing device (40) adapted to collimate the light beam (44) emitted by the source light (16) along a main propagation direction (X-X), wherein the light guide body (28) comprises at least one reflecting wall (48), arranged adjacent to said focusing device (40) and structured to receive a portion of the light beam (44) collimated by the focusing device (40) and to reflect it, thus satisfying the condition of total internal reflection on the reflecting wall (48) itself, towards the light outlet wall (36) along a secondary propagation direction (Y-Y), incident with the main propagation direction (X-X) according to an angle of incidence (\pm).
