Abstract (en)  
[origin: WO2016020509A1] The present invention relates to a packaging for an assembly of bottles with longitudinal axis XX, comprising at least a first cord (1) disposed in a first plane P1 substantially perpendicular to the axis XX and gripping said bottles; a second cord (2) disposed in a second plane P2 substantially parallel to said first plane, gripping said bottles and situated at a distance D, measured along the axis XX, from said first plane; a handle (4) formed by a cord which, in the stretched state, is disposed in a plane P4, referred to as the plane of the handle, perpendicular to said first and second planes, said at least one first cord and said at least one second cord being suitable for engaging in the grooves present on the external surface of said bottles. Interestingly, said handle (4) is connected at at least two points (40) to said first cord (1), the two points lying in a plane containing the centre of gravity of the packaging containing said bottles, and the packaging further comprises at least one third cord (3) disposed in a third plane P3 perpendicular to said first and second planes and to the plane of the handle, said at least one third cord being stretched between the first and second cord and disposed between at least two bottles.
